

A&M Mesh Spark Curtains

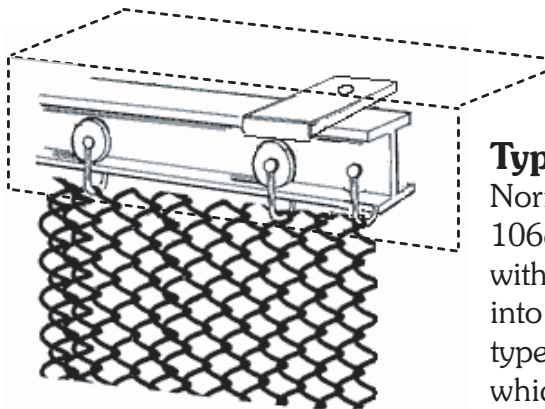

We manufacture Spark Curtains to suit all fireplaces, inglenooks, canopies, hoods etc. Available in 19 gauge mesh in black, brass or stainless steel. They are supplied complete with a 40mm x 40mm (1.5") pelmet/lintel bar to match the colour of the mesh. Included in the quoted price are one and a half times the width of the fireplace opening in mesh to give a good drape, together with an overlap in the middle, plus all fixtures and fittings.

Made to Measure
Easy to Install
Any Size

Type Two

Surface mounted pelmet to enable curtains to be drawn clear of the opening where the curtains would limit the view of the fire (surface mounted pelmets are charged extra)

Type Three

Normally supplied for any fireplace opening in excess of 106cm (42") They consist of an "I" section aluminium rail with wheels which enable the rail to be bent round corners into inglenooks, pelmets or hoods. As with other curtains, type three comes mounted on a 40 x 40mm pelmet/lintel bar which can be fixed by most of the quoted options (see over)

Side Returns - for inglenooks, canopies etc. type three can be turned on a 75mm (3") radius to enable the curtains to be stored out of sight down the insides of the fireplace opening when not in use.

Note: 300mm (12") of our mesh will occupy 30mm (1") of rail space each side when stored in the open position, however, do not forget that we supply one a half times the opening width and include this in your calculations.
